SUMMARY

Computer Science (AI & ML) graduate, 2026 batch, CGPA 8.64. At an Infosys Springboard internship, built the semantic search module of a medical knowledge-graph platform using Sentence-Transformer embeddings and Neo4j. Also built and deployed XGBoost prediction models in Streamlit. Skilled in Python, SQL, machine learning and NLP.

EDUCATION

Malla Reddy University Hyderabad, India

B.Tech, Computer Science and Engineering (AI & ML) | ***CGPA: 8.64/10*** *Aug 2022 – May 2026*

Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Machine Learning, Deep Learning, Natural Language Processing

EXPERIENCE

AI/ML Intern – Infosys Springboard Virtual Internship 6.0 Sep 2025 – Nov 2025

HealthIntellect: Medical NLP & Knowledge Graph Platform | *GitHub* *Remote*

- Built the **semantic search & query module** of a 6-module medical NLP platform, ranking documents and graph triples by **cosine similarity** of **Sentence-Transformer** embeddings for plain-English medical queries.
- Made every answer traceable by indexing **subject–predicate–object triples** with their source sentence, so users see the evidence behind each result.
- Integrated search with the platform's **hybrid NER** (spaCy + **BioBERT** + rules) and 3-strategy relation extraction, filtering low-confidence relations before storage.
- Loaded the knowledge graph into **Neo4j** with idempotent **Cypher MERGE** queries (no duplicate nodes on re-runs) and shipped it in a **Streamlit** app with **JWT** role-based access and live **Wikipedia/arXiv API** ingestion.

PROJECTS

Disease Insight – Multiple Disease Prediction System | *Python, XGBoost, Streamlit* 2025

- Built an **end-to-end ML web app** that predicts risk for multiple diseases from patient health inputs, with one **XGBoost** model per disease behind a single UI.
- Improved model quality through **data cleaning, feature scaling and feature selection**, validating each model on held-out test data.
- Served **real-time predictions** by persisting models with **Joblib** and loading them once at start-up; modular design lets new disease models plug in without touching core code.

Spam Email Classifier – NLP Text Classification | *Python, NLTK, Scikit-learn* Jan 2025

- Classified emails as spam or ham with a **Multinomial Naive Bayes** model on **Bag-of-Words** features, after an NLTK pipeline of tokenization, stop-word removal, stemming and POS-aware lemmatization.

TECHNICAL SKILLS

Languages: Python, SQL, R, Java (basic)

ML / NLP: Machine Learning, NLP, Transformers (BERT, BioBERT), Sentence Embeddings, Semantic Search, NER, XGBoost, Naive Bayes, Feature Engineering, Model Evaluation, Generative AI, Prompt Engineering

Libraries: Pandas, NumPy, Scikit-learn, Hugging Face Transformers, spaCy, NLTK, Streamlit

Databases: MySQL, SQLite, Neo4j (Cypher)

Tools: Git, GitHub, Power BI, Excel, Jupyter Notebook, VS Code, REST APIs

CERTIFICATIONS

- Microsoft Learn: Fundamentals of Machine Learning; Fundamentals of Generative AI
- Coursera: Python Programming
- Infosys Springboard: AI/ML Virtual Internship 6.0 Completion
